The FRS is a self-report version of the ALS Functional Rating Scale (Revised, ALSFRS-R) and details levels of functioning in the arms, legs, bulbar region, and breathing muscles. Lower scores represent lower levels of function. Cedarbaum et al (1999) J Neurol Sci;169(1):13-21

PatientsLikeMe (www.patientslikeme.com) is the leading online health community for patients with life-changing conditions. PatientsLikeMe creates new knowledge by charting the real-world course of disease through the shared experiences of patients with ALS, multiple sclerosis, Parkinson's disease, HIV, mood conditions (including depression, bipolar, anxiety, OCD and PTSD), fibromyalgia, chronic fatigue syndrome/myalgic encephalomyelitis, epilepsy and organ transplants. While patients interact to help improve their outcomes, the data they provide helps researchers learn how these diseases act in the real world. PatientsLikeMe endeavors to create the largest repository of real-world disease information to help accelerate the discovery of new, more effective treatments.
